

GOODS ASPECTS. (Programming)

- It has certain structure.
- Keeps the Regular size equal in all paragraphs.
- It is responsive.
- They are taking in consideration the Flesh-Kincaid recommendation about no more than lines/sentences per paragraphs.

BAD ASPECTS. (Programming)

- They are not using the `<H1>` element.
- They are using a `<H2>` as the main headline, not following the rules for the use of headlines.
- The article structure is not right, it has long paragraphs and small font-sizes.
- The Banner or main pictures is not cited.
- They are not using the elements `<figure>` neither `<figcaption>` in the IMG section.
- The `<h2>` is working with an `<a>` anchor element, there is no need for it because you are already in the article, why you should click again in the title?
- There is no contrast or clear differentiation between the headline, the lead paragraph and the regular text. **(WCAG) (Content must be perceivable).**
- Is not possible to navigate through the article via keyboard. **(WCAG) (Interface must be operable).**
- The font-sizes are not the most accurate, too small sizes in the regular text. **(Readability issues).**
- It is not recommended to use thin fonts on light backgrounds.
- Not using byline.
- Not using Date of publication.
- Don't apply the **Flesh-Kincaid** recommendation about 15 word per sentences, in this case is 17.66 average words per sentence.
- Readability score: **30.6.**
- Don't have a print Version.
- They use `
` to add space between paragraphs, this is a bad practice according to the W3C.
- There is not support of the information, it looks like the writer's opinion more than an article, maybe it should has a quote, external links, etc.

- They use one big `<p>` Paragraph to wrap all the paragraphs splitting them in ``. (Bad practice).

```
▼ <p>  
  ▶ <span style="font-size: 14px;">...</span>  
    <br>  
    <br>  
  ▶ <span style="font-size: 14px;">...</span>  
    <br>  
    <br>  
  ▶ <span style="font-size: 14px;">...</span>  
    <br>  
    <br>  
  ▶ <span style="font-size: 14px;">...</span>  
    <br>
```
